

# What make our skylights special

According to definition, *special* is defined as: "not ordinary or usual, different to what is normal". What make our skylights special is quality as well as extra features that provide additional benefits for home owners and installers.

## Beautiful lacquered timber frames.

Double lacquered timber, does not require additional painting after installation.

## Special cladding.

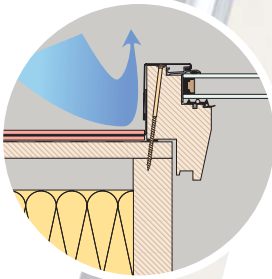

Polyester coated external cladding for longer and better performance, and solid wood protection.

## Low emission heat reflecting double-glazing.

Energy Star, NFRC, IGMA qualified glazing unit keeps the heat outside during the hot days, and warm air inside during winter time (the winter months).

## Discrete, low profile construction.

Better insulation of the skylight-deck joint. Less protruding skylight above roof surface, simply looks better.

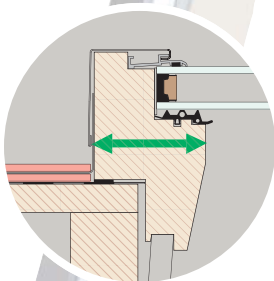

## New installation system.

Simple and easy to install. Just 4-6 screws (included) to install. Saves time.

## Durable construction.

Thick frame for maximum durability and long product life.

**Special perimeter gasket** underneath the frame, leaves no gaps or cracks between frame and deck. Another feature increasing installation insulation.

## Special internal gaskets system.

Extra protection draining condensation water to the outside. Less chance of dripping.
