FR	Ne pas utiliser de silicone
ES	No utilice silicon
KR	실리콘을 사용하지 마세요

US	PLANNING THE CONSTRUCTION OF A LIGHT SHAFT FOR YOUR FAKRO SKYLIGHT Building a light shaft is an integral part of finishing your FAKRO skylight installation. In the case of home with a flat ceiling it will bring the light through your attic into the room below. Construction of the shaft will govern the light distribution within the room. It is recommended to make the opening in the ceiling larger than the size of the skylight. The purpose is to create both, the visually pleasing effect of a larger room and to distribute the incoming light more widely within the room. Light shafts can also be used to direct light to work spaces such as kitchen benches or mirrored areas in bathrooms. Finishing the light shaft in pale shades or ceiling white will improve the light transmission from your skylight into the room.
FR	PLANIFICATION DE LA FABRICATION D'UN Puits DE JOUR POUR VOTRE FENÊTRE DE TOIT FAKRO La construction d'un puits de lumière fait partie intégrante de l'installation de la fenêtre de toit FAKRO. Dans le cas d'une maison avec un plafond plat, le lanterneau laisse passer la lumière du grenier dans la pièce au-dessous. La construction du puits détermine la manière dont la lumière se propage dans la pièce. Il est recommandé que l'ouverture au plafond soit plus grande que le lanterneau. L'objectif du puits est de créer l'illusion d'un espace plus grand, visuellement agréable et de diffuser la lumière entrante dans la pièce. Les puits de lumière peuvent également être utilisés pour diriger la lumière vers des espaces de travail, tels que des plans de travail dans la cuisine ou des surfaces miroir dans la salle de bain. La finition du puits dans des tons pastel ou blancs améliore la transmission de la lumière dans la pièce.
ES	PLANIFICANDO LA CONSTRUCCIÓN DE UN CONDUCTO DE LUZ PARA SU TRAGALUZ FAKRO La elaboración de un vano o claro de luz constituye una parte integral para terminar la instalación de un tragaluz FAKRO. En el caso de viviendas con techos planos, el tragaluz permite que la luz del ático entre en la habitación de abajo y su construcción determina la distribución de la luz dentro de la habitación. Se recomienda que la apertura del techo sea mayor que el tragaluz. El propósito del tragaluz es crear un efecto agradable de una habitación de mayor tamaño y propagar la luz que entra en la habitación. Los tragaluces también se pueden usar para dirigir la luz a los espacios de trabajo, tales como alacenas de cocina o espejos en el baño. El acabado del tragaluz en tonos pastel o blancos mejora la transmisión de la luz desde el mismo a la habitación.
KR	파크로 천창을 이용한 채광통로 설계 라이트 샤프트를 짓는 것은 FAKRO 채광창 설치를 끝내기 위해 필수적입니다. 평평한 천장을 가진 집의 경우, 다락방을 통해 아래의 방으로 빛을 가져올 것입니다. 샤프트 공사는 실내 배광에 영향을 미칠 것입니다. 천장의 개구부를 채광창의 크기보다 크게 만드는 것이 좋습니다. 그 목적은 큰 방의 시각적으로 쾌적한 효과를 만드는 것과 들어오는 빛을 방 안에서 더 넓게 분포하도록 하는 것입니다. 또한 라이트 샤프트는 부엌, 베란다, 욕실의 반사되는 구역과 같은 작업 공간으로 빛을 향하도록 할 수 있습니다. 연한 색조의 라이트 샤프트와 흰색 천장으로 마무리하면 채광창에서 방으로 들어오는 빛 투과 효과를 향상시킬 수 있습니다.

II

US	Decide the location and size of the light shaft relative to the skylight and the room.
FR	La première étape consiste à sélectionner l'emplacement et la taille du puits de lumière par rapport au lanterneau et à la pièce.
ES	El primer paso consiste en elegir la ubicación y el tamaño del tragaluz con respecto espacio de la habitación.
KR	채광창과 방을 기준으로 라이트 샤프트의 위치와 크기를 결정합니다.

III

US	Prepare the hole in the ceiling using headers and trimmers. Follow the rules used in roof and wall construction.
FR	Préparer l'ouverture dans le plafond à l'aide des poutres auxiliaires et de plafond. Respecter les règles utilisées dans la construction des toits et des murs.
ES	A continuación, prepare el vano o claro en el techo con ayuda de vigas auxiliares y viguetas. Se deben respetar las normas utilizadas en la construcción de techos y paredes.
KR	헤더와 트리머를 사용하여 천장에 구멍을 만듭니다. 지붕과 벽 공사에 사용되는 규정을 따릅니다.

IV

US	Frame out the shaft, line with plasterboard, and ensure that the shaft is clad with roofing insulation in the roof cavity. This will reduce heat transmission from the roof cavity into the home in summer, and help reduce heat loss from the home in winter.
FR	Préparez un cadre au puits, munissez-le d'une plaque de plâtre et assurez-vous que le puits est enveloppé avec l'isolation de la toiture dans la cavité du toit. En été, cela réduira la transmission de chaleur provenant de la cavité du toit vers la maison et aidera à réduire la perte de chaleur en hiver.
ES	Marque los conductos, raye con yeso y asegure que el conducto está revestido con el aislamiento del techo en la cavidad del techo. Esto reducirá la transmisión de calor de la cavidad del techo dentro de la casa en el Verano, y ayuda a reducir la pérdida de calor de la casa en el invierno.
KR	채광통로 설치를 위한 프레임에 세우고 석고보드 등으로 통로 면을 만드세요. 단열재로 채광통로를 감싸세요. 단열재 시공은 여름철 천장의 열기가 실내로 유입되는 것을 줄이고, 겨울철 열 손실을 줄입니다.

A

US	Pull out bolts and remove the mosquito screen. Set aside.
FR	Retirez les boulons et enlevez le moustiquaire. Mettez de côté.
ES	Saqué los tornillos y retire la mosquitera. Colóquela al lado.
KR	방충망 측면의 볼트를 당겨 방충망을 빼낸 후, 필요할 때까지 잠시 보관하세요.

B

US	Unscrew and set aside the screw on the bottom of the sash.
FR	Dévissez la vis et mettez-la de côté à la base du châssis.
ES	Desenrosque y deje al lado el tornillo en la parte inferior de la banda.
KR	천창 하부 샤키의 나사를 풀어 빼낸 후, 필요할 때까지 잠시 보관 하세요.

C

US	Lay down the skylight.
